

FIRST STEP FOR A DENTAL IMPLANT. AUTOLOGOUS MATERIAL AS ACCELERATOR FOR RECONSTITUTION OF BONE TISSUE.

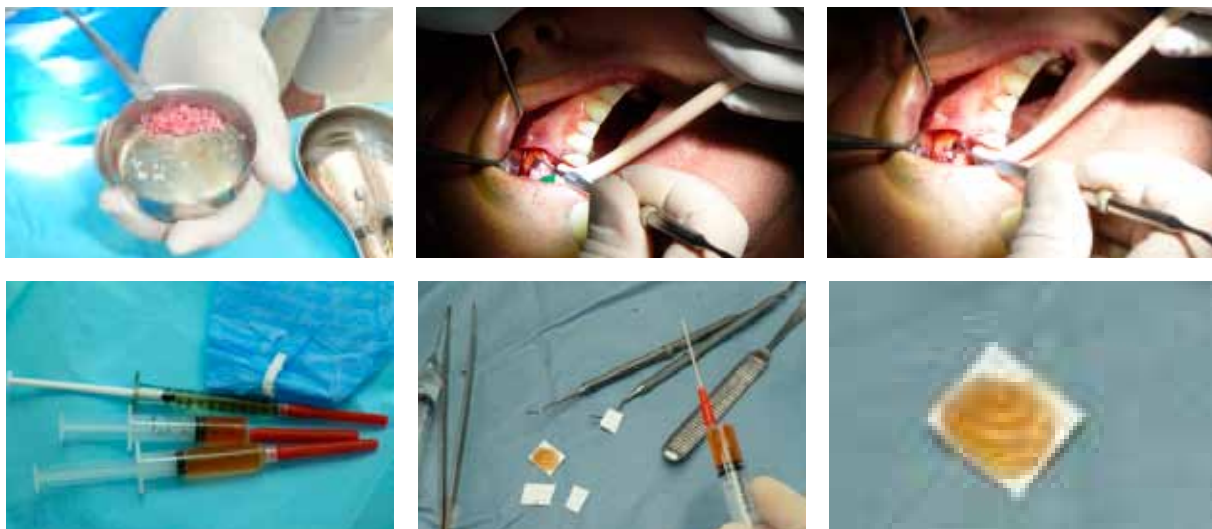

Dr. Scampa, Noémie Parraga (infirmière), Genta Plasari
Dr. Scampa's Office

Protocol:

Mix the Autologous platelet rich plasma gel (RegenKit®-BCT-D) with bone substitute and autologous bone extract.

Apply the mixture into patient tooth socket. A collagen membrane was soaked with A-PRP and ATS (RegenKit Surgery, ratio 10:1), then positioned on the grafted material to prevent adhesion of tissues during the healing.

Closure of scaffold by suturation.

RegenKit®-BCT-D RegenKit® Surgery
